

# Air O Maxx Standard

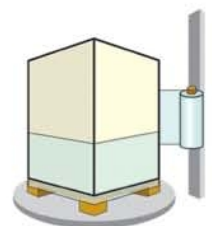

## ➤ For products that need aeration

Ideal for products that need to breathe in order to remain in excellent condition during transportation and storage.

Because of the large openings, Air-O-Maxx gives maximum aeration to the products which in combination with its maximum elongation and strength gives excellent stabilization and visual appearance to the pallet.

This film is ideal for the food and drink sector:

- Beverages - including beers, wines, soft drinks and fruit juices.
- Food Industry – All fresh ambient, chilled frozen and warm fill products.
- Pet Food - Dried, Frozen and Canned Pet Food.
- Pharmaceutical Products.
- Frozen Food - meat, fish.

# Air-O-Maxx

## THE NEW GENERATION IN PACKAGING MATERIALS

Air-O-Maxx is a macro-perforated stretch film.

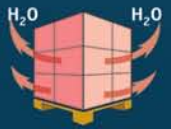

The concept of Air-O-Maxx is to offer a breathable stretch film which in combination with its maximum elongation and strength, can fulfill the requirements of tight wrapping of goods on to a pallet.

An added benefit of Air-O-Maxx is the environmentally friendly nature of the product. Industry and Government legislation now demand products which use less material and are easy to recycle.

State-of-the-Art technology is used for the production of Air-O-Maxx. The innovative production method is protected by International and European patents (patent pending).

You might consider the use of Air-O-Maxx for the following products

**Hot palletised products: avoiding condensation within pallet (e.g. soft drinks, beer, canned food, pharmaceutical products, pet food, e.t.c.).**

**Chilled and deep-frozen products: requiring fast cooling after palletization (e.g. dairy products, ice cream, meat, fish, frozen snacks, e.t.c.).**

### Advantages of Air-O-Maxx

#### 1. CONSIDERABLE LOWER WASTE VOLUME

Because of its innovative design Air-O-Maxx has a smaller waste volume after unwrapping than other kinds of similar products.

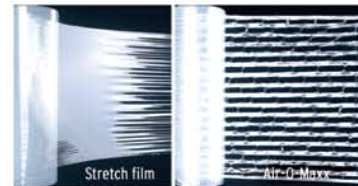

#### 2. STOPS CONDENSATION ALLOWS VENTILATION

Air-O-Maxx due to its large openings prevents the built up of condensation and allows air circulation, thus protecting the goods and other packaging materials, i.e. Damage to labels and boxes, rust etc.

#### 3. MAXIMUM ELONGATION AND STRENGTH

Air-O-Maxx has the capability of maximum elongation and strength in order to give perfect pallet stabilization and excellent pallet appearance.

#### 4. NO REDUCTION IN WIDTH

Regular stretch film and knitted net reduce in width after stretching. Air-O-Maxx keeps its width after stretching thus you will save cost and time.

#### 5. FORKLIFT FRIENDLY

Unlike netting, Air-O-Maxx does not tangle in the wheels of forklifts.

#### 6. GOOD GRIP

Air-O-Maxx elastic qualities have a tendency to contract and therefore produces a tighter wrap of the palletised goods. Despite the perforations the pallets stay stable during transportation and storage.
